Malaysia's Premier Play Equipment Manufacturer

ABOUT PRO-LANDSCAPE STRUCTURE

At Pro-Landscape Structure, our playground products are designed and engineered to meet the boundless imagination of children and heighten their enjoyment. With our talented design team, we are able to focus on customized designs and adventurous play activities that meet safety standards. Every year, we strive to push the parameters of innovation, durability, and excitement.

Our equipment are protected with the best warranty, guaranteeing defect-free products, materials, and workmanship under all normal use and service. We insist on the highest standards in customer service. After all, we truly believe that, "children discover the world through play".

WHAT'S **NEW** IN CATALOG VOLUME 5?

Flipping through this catalog, if you are a regular, you'll notice that we're coming in with a new approach this time. Pick your product according to the play values you want to include in your play environment. Each is represented with an icon placed beneath the product specification.

There're new colour schemes to mix and match according to your preferences. We won't judge.

And what good is a new catalog without new products in it? Check out our CHALLENGE and WATERPLAY series. We put our blood and tears into it so you can have your laughs and giggles.

DESIGN PHILOSOPHY

It is the guideline that we use to plot our design map and the direction we should cast our effort at, while not limiting creativity in producing products that are both functional and visually charming.

To churn out the perfect outcome, we first ask ourselves these fundamental WHAT questions:

.....

REQUIREMENT The specifications and experience laid out by our clients for us to go by in producing the design

.....

AGE GROUP The intended user of the playground products

.....

LOCATION The physical area where the playground is to be situated, also taking into account the environmental elements and how these will affect the products

.....

SAFETY ZONE Design must accomodate safety margin between products and obstacles

.....

The experience and developmental elements that will be integrated as the functions of the play equipment

PLAY VALUE

DESIGN PROCESS

Meeting the requirements of a Quality Management System (QMS) is a big differentiator between reliability and uncertainty. From *Design, Manufacturing, to Installation*, we are committed to total quality management: customer focus, continuous improvement process approach, and strong management commitment backing up the initiatives. This will necessarily trickle down to the final products that you, as a customer, expect to receive.

Today's big word is SAFETY. Adhering to world standard in playground safety is hard work, but absolutely necessary. We have our own Certified Playground Safety Inspectors to keep things in check. Because some risks are just not worth it.

PRE-SCHOOL SERIES

Integrated Playset

Sicomel
children play equipment system

Children 2 - 5 years old are just starting to discover their basic external biological functions like movements, balance, grabbing and clutching, and also sight and depth perceptions. At the same time, the boundary line between challenge and out right danger is at its finest. Understanding these, we concocted a perfect recipe of play equipment in our PRESCHOOL SERIES.

Perspective View

Our signature Anaconda slides are made with double-layered rotomoulded polyethylene plastics that are durable while having sophisticated look to it. But the ace up the sleeve is the unique modular sections that can be partnered up to make a long straight slide or a curved and windy one. When the time comes for maintenance, replace only the defected section, not the whole slide. Not that that's coming too soon though.

Do you realize that one can do so much with just a piece of flat plastic? It's such a forte in our portfolio to be good at carving plastics. It's not just normal plastics though, we use High-Density Poly Ethylene (HDPE) that resists fading and deformation. Our own CNC milling machine is able to whittle small grooves down to just 1 mm, increasing the design flexibility.

One glance at our playground set, you can see how we use the design to lure kids in, to come and play. And that's not a bad thing, given that the things unseen are also taken care of. Things such as the materials we use are of high quality and non-toxic. Standards-compliant raw metal with rust treatment, and entrapment-proof holes and slits, nooks and crannies, all to provide the safest play environment for young precious children.

The T-tube is a crawlway tube with intersections, that allow more tubes to be connected perpendicularly or simply pointing up to let sunlight in. At the moment, Pro-Landscape Structure is the only local manufacturer carrying this design. Opt for the T-tube to be included in your playground set next time you drop us an inquiry.

CONCEPTUAL PLAYGROUNDS & PLAYSCAPES

Modular playgrounds integrated into themed playscapes.
Weaving in storylines into normal play.

LOCATION

Suasana Lumayan - Cheras, K.L

PRODUCT INNOVATION

A car and a truck bodyshell, and a bike's chassis made usable again as parts of playable components in the whole playground area.

TITLE : THE RIDE TO THE LOST FOREST

Why settle with regular playgrounds? Children's physiology and cognitive functions develop better when their brains are prodded with new stimulants every now and then. Such stimulants can come in from their play environment they're engaging in. Hence, it's our call as the playground manufacturer to bring forth something more than regular, like this playscape. Explore more possibilities in the coming pages where ideas know no boundaries.

Jump out of the aquarium and right into the open space. Every element from the habitat of the guppy fish, or *ikan gapi*, is bigger and closer to interact with, play with, and learn from. Sculpted from a variety of quality plastics, acrylics, ropes, and natural wood, this custom playscape is an adventure galore bathed in an inviting colour scheme, that's sure to reel in a bunch of happy explorative kids.

IKAN
GAPI

A showcase of a complete butterfly metamorphosis phases should not be kept in glass cases, but laid out in the open to be interacted with in the form of various play activities. It's a great way for children to spread their metaphorical wings and explore the wonderful world of science.

Butterfly Metamorphosis Playscape

**THE
SWAMP**
playscape

NIGHT

DAY

The eeriness of the deep dark nights at a remote swamp usually doesn't go together with the fun nature of a typical playground. But then, this concept is anything but typical. Sprinkles of LED lighting and luminous glow in the dark paints brighten up the nights so that there's plenty of fun to be had long after the sun is down. Effigies of mangrove roots, rotten driftwoods, sunken boats, and the terrifying glowing green alligator, are combined to create a realistic atmosphere so spooky it's fun to play in.

These renderings are artist's impressions only. Actual specifications may vary and colours displayed are subject to availability.

Nature is not a place to visit. It is home. Wave the kids to come home to play in the midst of greenery where the air doesn't choke those delicate little lungs. If you vision an open space like this, this playground concept will fit just nicely preserving the surrounding landscape with such balance of earthy colours and natural elements in its design.

pondok &
treehouse

These renderings are artist's impressions only. Actual specifications may vary and colours displayed are subject to availability.

Soaking Wet

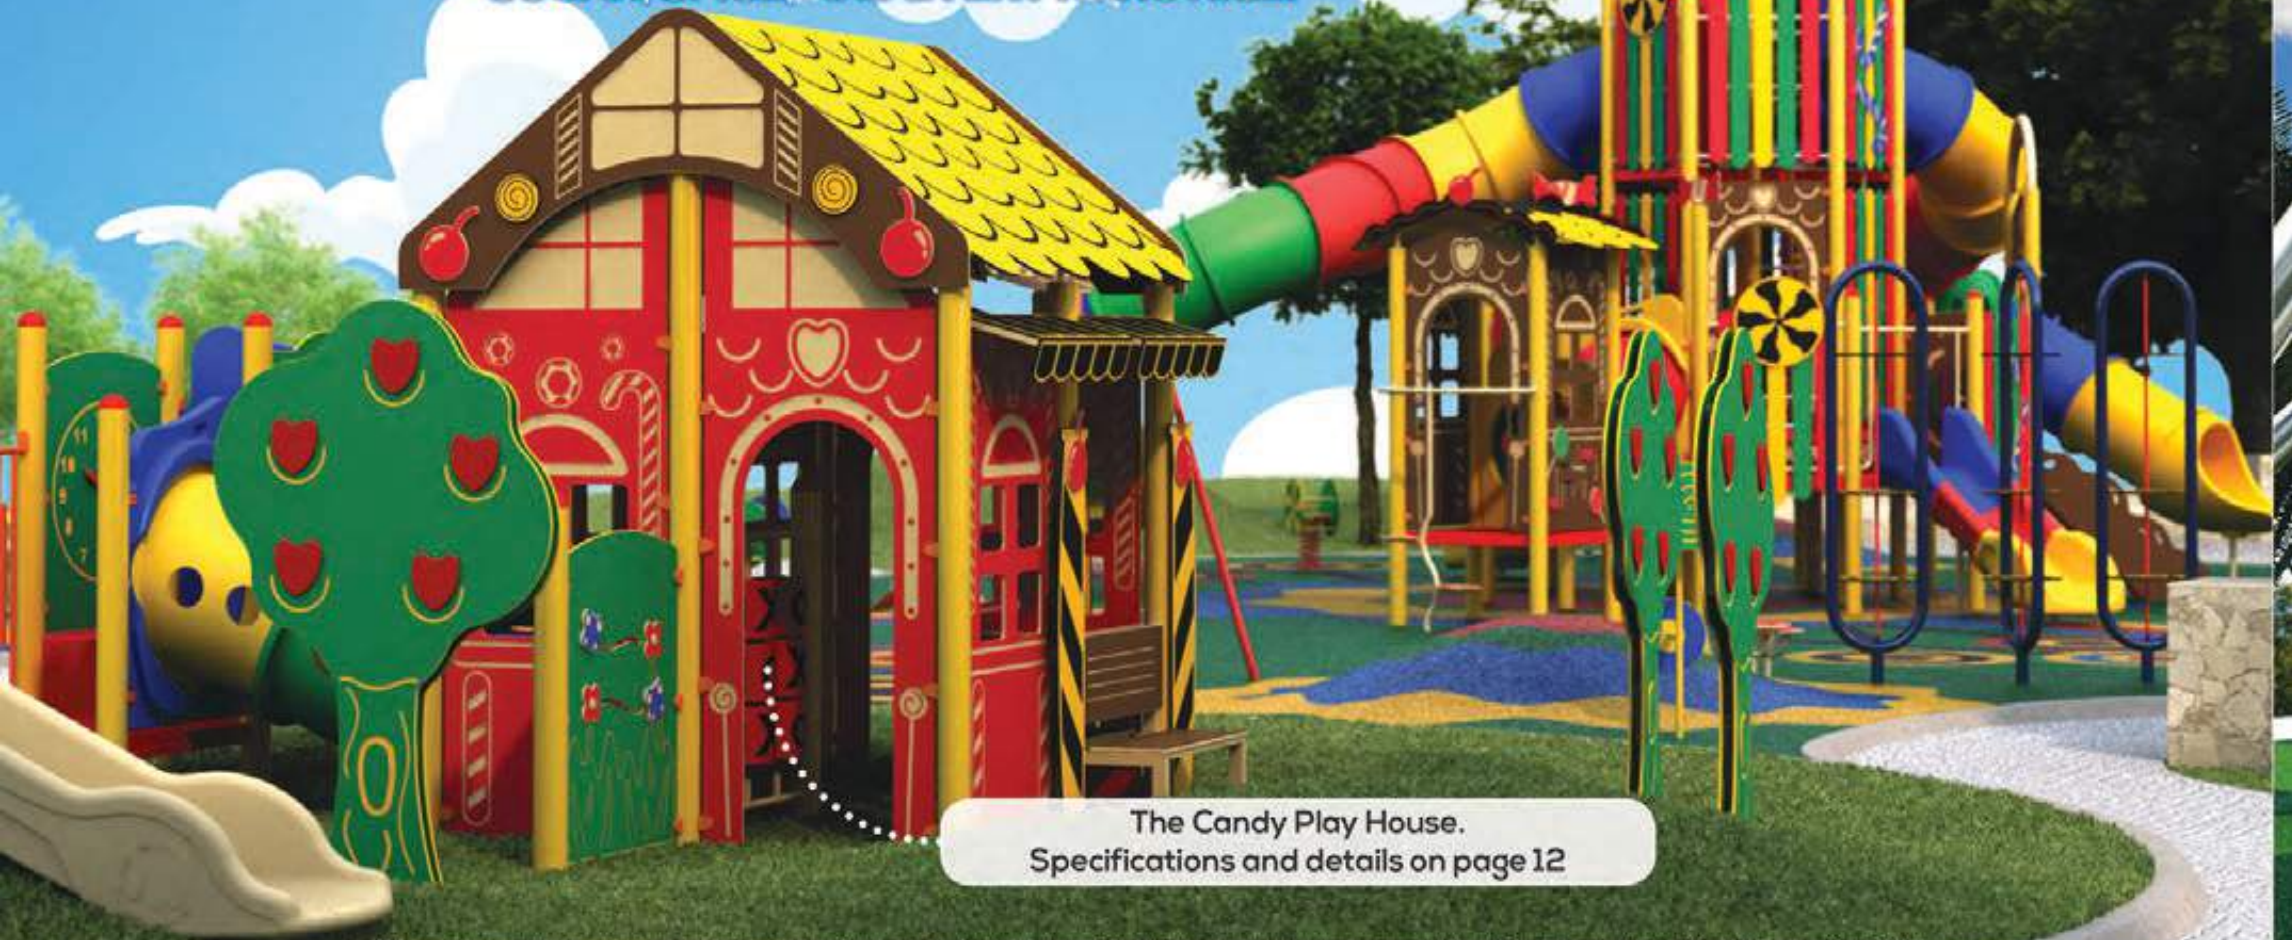

An interesting reaction can be observed when kids are exposed to a chemical compound called Dihydrogen Monoxide. The heart rate goes up, endorphine level increases, they are less perceiving of the vital nociception their little bodies are trying to tell. Too much exposure can also cause the skin at their fingertips to wrinkle. These are the symptoms scientists call, having fun.

Waterplay equipment.

People flock in public parks to satisfy their communal and socializing needs, or simply to unwind. Any good park will receive mass visitors that include children. Life just wouldn't be complete without a good sized playground equipment to keep the town's kids happy.

Perspective View

Because flat powder coating is too mainstream. The effect seen here is the result of multi layered airbrush coating applied to metal parts. This happens when the pressure to set out as unique is too great. No shame in that as living life being similar is as exciting as watching paint dry.

Slippery when wet? That won't be the case when applying our revolutionary Polytuff® coating to your deck platforms and ramps. The rubberized plastic compound engulfing the metal parts is melted at high temperature like hot cheese on lasagna, ensuring total coverage so rust will never creep in. Polytuff® coating is so hard-wearing and resilient allowing kids to scurry and scamper about without leaving behind unsightly scrapes and scratches.

Life itself is a risk. Including certain challenge into children's play is the best way to introduce risk to kids to shape them to be better prepared for the future. So, face it helicopter parents, kids need challenge. But fret not, our CHALLENGE SERIES offer as much challenge as the amount of safety considerations built into it to let kids explore freely.

Climbing is something instinctive that children do and it is part of their development and growth. Climbing allows children to improve their coordination and motor skills. This can be through improved fitness levels, spatial and directional awareness as well as balance and agility. Products like The Climbing Blocks aim to tackle precisely this part of a child's development.

Extensive use of ropes has somewhat become our fetish currently. Not what you might think of course, but the wibbly-wobbly nature of stretched ropes over a length presents its own unique challenge. Progress through a full course towards the finish line and see whether you're already at the end of your rope.

If a kid would spend 2 hours playing on a dry playground, it would take double that to finish off on a wet one. Water can do just amazing stuff. But whatever goes behind wetting a playground is a different game altogether. Turning the tap on to bring all the fun is the job only specialists can deliver.

ELLYHEAD WATERSPRAY

What's better than a playground set? A stunning playground set at the center with several independent items as its peripherals. That would certainly be more enticing and adding more values in the play sense.

INDEPENDENT ITEMS

FUN SEE-SAW
2 to 4 seaters
Age limit : 2 - 12 years
Colour scheme ● ● ● ●

OUTDOOR FITNESS

PROBUILDER
OUTDOOR FITNESS SYSTEM

The Pro-Builder Outdoor Fitness series sports a sleek new patented design unlike any other in the market. Common parts shared across the range makes maintenance absolutely a no sweat affair. With good looks and proven functionalities, it's such a great value for a nice workout under the blue sky.

{ **The OUTDOOR GYM SERIES** }

{ Parks and open spaces need equipment like the **OUTDOOR GYM SERIES** that are ergonomically designed to correspond with the body's natural movement, preventing musculoskeletal pain or injury. All the moving mechanisms have undergone various testing and improvements using high grade bearings for a polished smooth operation. }

{ **The PARCOURSE SERIES** }

Feeling tight and stiff at the joints? The couch potatoes of today's society are not fully utilizing the body's whole range of motion. The PARCOURSE SERIES are made to turn back those potatoes into lean meat. A wide range of stretches and workouts will bring back strength, agility, and balance in an individual.

Kids jump and fall, roll and tumble, knock and bounce, all are part and parcel of playing. It's incumbent upon us, as a playground manufacturer to provide the safest possible play environment. According to safety standard, soft impact absorbing flooring is mandatory for any playground area.

PRO-SAFE BENEFITS

- Excellent dimensional stability under varying temperatures
- Soft and comfortable underfoot feel and safe to walk on barefooted
- Impact absorbent and reduces the risk of injury from falling
- Ideal for creating designs of different shapes and colours
- Withstand scuffing, grinding, and heavy foot traffic
- Broad colour selection and custom colour option
- Requires no sanding, repainting, or special surface treatment
- Made from recycled material and non-toxic substances

PRODUCTS

EPDM Seamless Flooring

Stands for Ethylene Propylene Diene Monomer Rubber. It's actually a colourized mixture of natural and synthetic rubber shredded into small granules. These granules are skillfully laid on the surface to create various forms of designs for your flooring. A type of organic non-toxic base moulded binder is used to keep your flooring together for a long time.

Rubber Tiles

PRO-SAFE absorbing rubber tiles are premade with strict tolerances to ensure uniform dimension and colour, resulting in perfectly tileable 0.5m x 0.5m pieces. Choose from available thickness of 20mm, 50mm, or 70mm to cater for the different levels of impact absorbing capacity required. Using rubber tiles is a quick safety flooring solution without compromising quality and visual appeal.

EPDM COLOUR SELECTIONS

Not all colours are available at all times for all seasons. Do contact our representatives to enquire.

Malaysia's Premier Play Equipment Manufacturer.
